

INSY7311 ICE Task 03

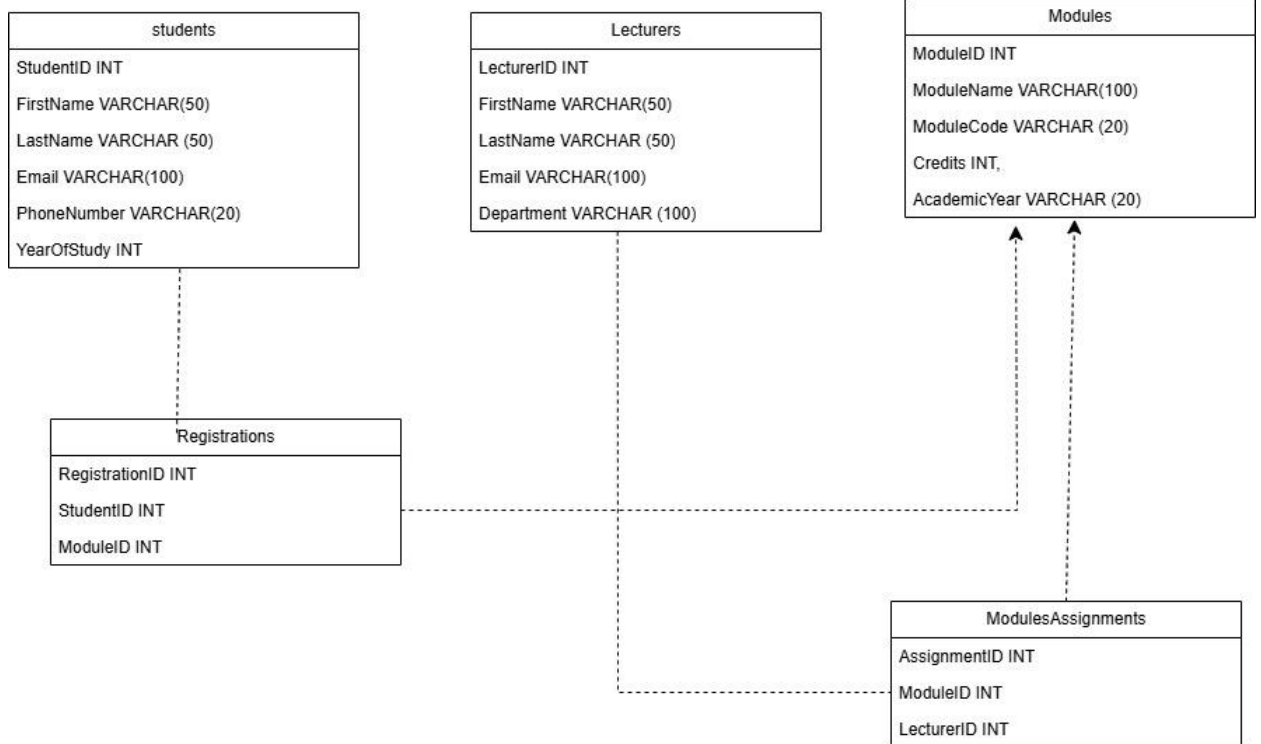

Programme Management System (PMS)

1. List of requirements:

The system will make use of identifies for access control management of two main types of users that will use the system.

- Admin Staff – Are responsible for capturing and managing system data such as students, lecturers, modules, and registrations. They can add, update, and view records within the system.
- Lecturers – Lecturers are recorded in the system and assigned to specific modules. Their details are stored so that modules can be linked to the lecturers responsible for teaching them. They have minimal access control to records
- Student Management – The system must allow users to add and maintain student information including names, contact details, and year of study.
- Lecturer Management – The system must allow users to add lecturer information such as names, email addresses, and departments.
- Module Management – The system must allow users to create and store modules, including module name, module code, credits, and academic year.
- Lecturer Assignment module– The system must allow lecturers to be assigned to specific modules they teach.
- Student Registration – The system must allow students to be registered for modules offered in a specific academic year.
- The system will store and manage information through the Students ,Lecturers, Modules and Registrations model entities

2. A database table structure:

3. ERD:
